

Name: Daniel Owie

Day 1: Setting Up Development Environment

List of Installed Software and Tools

VS Code(version 1.101)

Live Server Extension

Google Chrome(version 137.0.7151.103/104)

Steps for Downloading Tools

VS Code

1. Go to any browser and search "VS Code download"
2. Then navigate the VS Code official website.
3. Scroll until you see VS Code setup download for your type of device whether MacOS or Windows.
4. Once you have the setup downloaded go to your files folder and navigate to the download folder.
5. Then you will see VS Code setup installer.
6. Click on it and a VS Code download wizard appears.
7. Allow it to make changes to your device.
8. Then configure it however you want.
9. Then after configuring it click on install and the VS Code application will appear on your device.
10. Now your VS Code application is ready for use.

Live Server

1. In your newly downloaded VS Code navigate to extensions on the left of your screen.
2. Then search Live Server and click install.

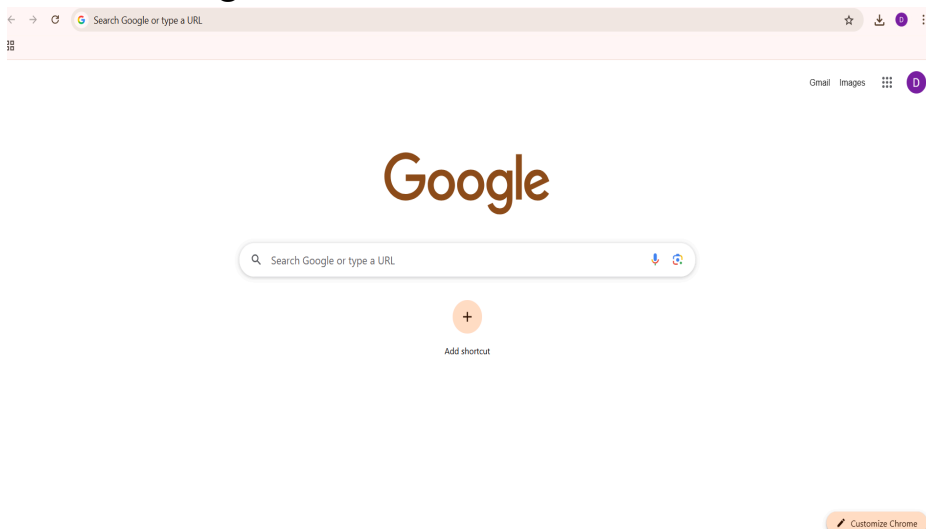

3. And your Live Server is ready for use.

Google Chrome

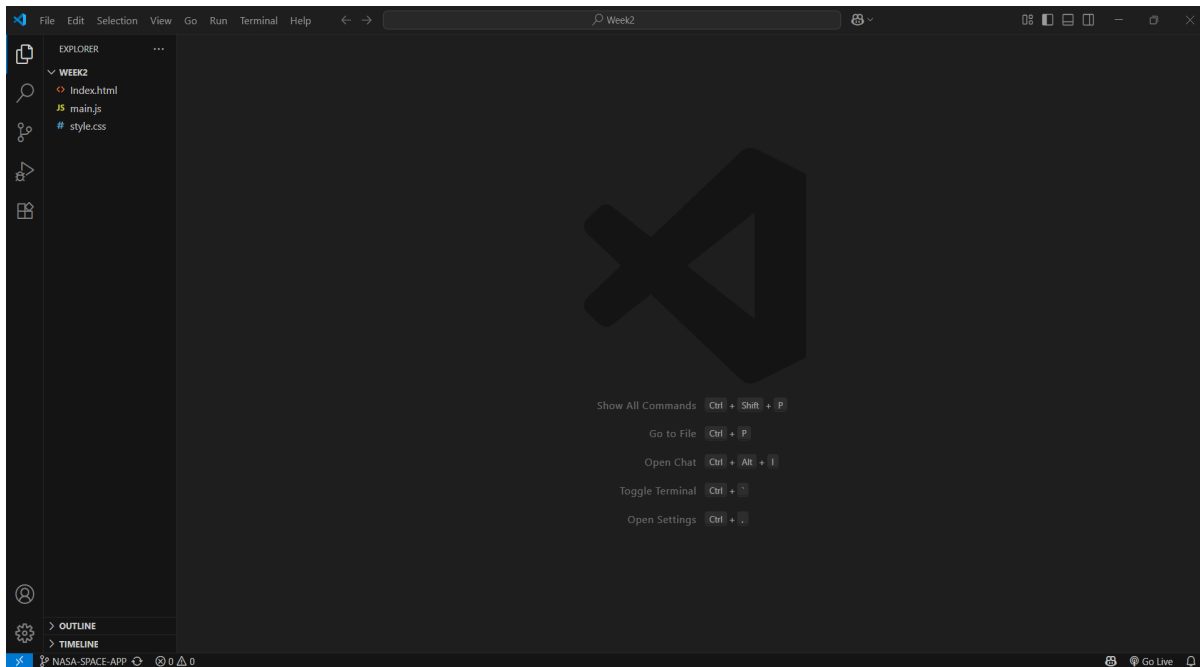

1. Go to any browser and search “Google Chrome download”
2. Then navigate the Google Chrome official website.
3. Scroll until you see setup download for your type of device.
4. Once you have the setup downloaded go to your files folder and navigate to the download folder.
5. Then you will see the Google Chrome setup installer.
6. Click on it and a Google Chrome download wizard appears.
7. Allow it to make changes to your device.
8. Then configure it however you want.
9. Then after configuring it click on install and the Google Chrome application will appear on your device.
10. Now your Google Chrome application is ready for use.

Live Server

Issues Encountered

Google Chrome

While setting up Google Chrome I had some problems. For instance you might not allow the setup to make changes to your device and it will not work. So instead redownload it and allow it to make changes to your device. Also you might have problems using an account to sign in into Google Chrome but it can be used with a guest account. Although the downside of using a guest account is not being able to sign in into websites. These are the problems I faced while setting up Google Chrome.

VS Code

While setting up VS Code I had some problems. For instance you might not allow the setup to make changes to your device and it will not work. So instead redownload it and allow it to make changes to your device.

Live Server

I didn't have any problems downloading the Live Server extension.
